LED Light Kit *Patent Pending

SAFETY FIRST: Always wear safety glasses when working with tools. Disconnect the vehicle battery negative before starting any work.

NOTE: Use the kit with 2 LEDs for the gauges and the kit with 4 LEDs for the tachs and speedos.

❖ Remove the rear cover to gain access to the light socket (tachs and speedos).

1. Remove the light socket from the rear of the instrument.
2. Pull the light bulb from the socket (**Figure 1**).
3. Insert rubber bumper into the LED kit. Then insert the LED kit into the light socket. Be sure that the polarity is correct: "+" on the board to the white wire on the socket, which should be connected to the +12V dash light circuit. The black wire should be connected to the vehicle ground.

NOTE: If the LED light kit is installed backwards, the light will not function. Remove and install correctly.

4. Reinstall the socket into the rear of the instrument.

❖ Replace the rear cover (tachs and speedos).
